

Policy on Ethics, AI Attribution, and Intellectual Property

Global AI Governance Initiative
February 2026
Mandatory for all Working Group Members

Abstract—This manual establishes a comprehensive framework for ethical conduct, intellectual property (IP) protection, and security protocols for the international research team leading the initiative for a Multilateral Global Governance Committee on Artificial Intelligence. Centered on the urgent protection of women and children from systemic algorithmic harm, this document translates high-level ethical mandates into operational research norms for both internal workflows and external academic deliverables. The guidelines are strategically aligned with the European Commission’s Ethics Guidelines for Trustworthy AI (2019), IEEE publication standards, and the CECierj/FAPERJ research framework [3]. The manual introduces a standardized “AI Influence Scale” to distinguish between auxiliary support and dependent generation, mandating a human-in-the-loop approach to ensure technical accountability and human rights alignment. By addressing critical issues of data privacy, technical provenance, and digital resilience, this framework facilitates the safe deployment of generative technologies within an evidence-based policy environment. Furthermore, this document serves as a practical demonstration of its own ethical principles, having been developed through a collaborative human-AI workflow Google Gemini and OpenAI ChatGPT-5 [1]. This methodology exemplifies how supervised AI can enhance academic efficiency while upholding the creative integrity and strategic vision of human researchers. **Index Terms**—AI ethics, intellectual property, data Research, AI governance, data protection.

I. INTRODUCTION

This document establishes the ethical standards and copyright guidelines for all research, technical reports, and scientific publications (IEEE/ACM style) produced by this initiative. Our goal is to ensure academic integrity, protect original authorship, and lead by example in the transparent use of Generative AI.

II. GENERAL PRINCIPLES

A. II.A. Human-in-the-loop

II.A.1. AI is a tool, not an author. All technical outputs must be supervised, reviewed, and validated by the human lead of the respective pillar.

B. II.B. Anti-plagiarism

II.B.1. The use of AI to modify or rewrite existing texts does not waive the obligation to cite original sources.

C. II.C. Licensing

II.C.1. Any adaptation or reuse of protected content using AI must strictly respect original licenses and permissions.

D. II.D. Transparency

II.D.1. All work developed with the assistance of Generative AI must follow the mandatory disclosure standards outlined in this policy.

III. AI INFLUENCE SCALE

A. Authorship Tiers

A. Tier 1: Auxiliary use (Support)

1.1. Definition: AI used for grammar checking, translation, or structural formatting.

1.2. Attribution: Minimal disclosure in the “Acknowledgments” section.

B. Tier 2: Hybrid creation (Collaborative)

2.1. Definition: AI used to generate drafts, synthesize research data, or assist in technical brainstorming based on human-provided prompts.

2.2. Attribution: Mandatory disclosure of the tool (e.g., Google Gemini) and the scope of its use.

C. Tier 3: Dependent creation (Drafting)

3.1. Definition: Large sections of text or code generated by AI.

3.2. Attribution: Strictly prohibited for final IEEE submissions unless explicitly rewritten and validated by a human expert to ensure technical accuracy.

IV. MANDATORY DISCLOSURE TEMPLATE

Every internal or external report must include the following footer: “This document was drafted with the assistance of [AI Tool Name/Model], under the strict supervision, technical review, and final approval of [Human Lead Name]. We acknowledge the ethical guidelines of the [Name of the Institution] on AI authorship and the foundational principles of data protection and privacy at the international and national levels.”

V. DATA POLICY & CONFIDENTIALITY

Volunteers are prohibited from feeding sensitive, unreleased data or internal diplomatic communications into public AI models to prevent data leaks. Use only approved environments for data analysis.

ACKNOWLEDGMENTS AND PROVENANCE

[1] Technical Generators: Google Gemini (Large Language Model) and OpenAI GPT-5 (ChatGPT).

[2] Supervision and Revision: Lydia Thayline, Founder and Lead Strategist; Melissa Pineda Brown, Research Associate

[3] Institutional Inspiration: IEEE (Institute of Electrical and Electronics Engineers) Publication Standard, European Commission (Ethics Guidelines for Trustworthy AI, 2019) and CECierj/FAPERJ (Ethics Code for AI in Education, 2025).
